SUMMARY

Cybersecurity Researcher and published vulnerability researcher with hands-on experience in penetration testing, vulnerability assessment, and Capture the Flag (CTF) architecture design. Discovered more than 20+ vulnerabilities and Recently credited with CVE-2025-65647 for discovering an IDOR vulnerability in an Online Shopping Portal and rest are yet to be published. Skilled in conducting research on government websites, identifying critical security gaps, and delivering detailed reports to strengthen defense strategies. My commitment to security education includes extensive community contribution, highlighted by my role as a Mentor and Instructor who delivered a focused 3-day penetration testing bootcamp at Providence Women's College, Calicut. Passionate about cybersecurity education, ethical hacking, and advancing practical security solutions.

SKILLS

- **Pentesting Platforms:** TryHackMe (Top 3%), VulnHub
- **Specializations:** Web Application, Network, Android Pentesting
- **Tools & Technologies:** Nmap, Burp Suite, Wireshark, Metasploit, Hashcat, Peass tools, ADB, Apktool, Frieden, Jadx, Evil-WinRM, Responder, Shodan, OpenVAS & Nessus, Shell Scripting, Splunk

EXPERIENCE

Hacker4Help

Apr 2025 - Jun 2025

VAPT Intern

- Engaged in real-time vulnerability assessments and penetration testing tasks
- Assisted in preparing reports on exploited vulnerabilities
- Practiced and improved offensive security skills under mentorship

EHACKIFY

Apr 2025 - Present

Research Team Member

- Collaborated with security team members to design and develop the technical architecture for an upcoming Capture the Flag (CTF) cybersecurity competition.
- Assisted in planning and executing the CTF event to enhance participants' skills in penetration testing, incident response, and threat analysis.
- Collaborated with a team of 5 security researchers to perform penetration tests on government websites; findings were used to implement security policies for web applications.
- Documented research findings and prepared comprehensive security reports to support improved defense strategies and mitigation measures.

CERTIFICATIONS

- **Certified Network Security Practitioner (CNSP):** The SecOps Group (November 2025)
- **Introduction to Linux (LFS101):** The Linux Foundation (November 2025)
- **Ethical Hacker:** Cisco Networking Academy (June 2025)
- **Mobile Hacking Lab:** Mobile Hacking Lab (July 2025)
- **Cybersecurity Analyst Job Simulation:** Forage (December 2024)
- **CVE-2025-65647 Credited Researcher:** Discovered and reported Insecure Direct Object Reference (IDOR) vulnerability.

PROJECTS

AutoReconX: Resilient Reconnaissance Script

- Developed a Bash script to automate initial reconnaissance, integrating Subfinder, Shodan, and Nuclei, saving multiple hours per day.
- Documented fixes to address the three biggest causes of tool failures post-automation to improve the success rate of the automated initial reconnaissance phase for new target domains.

Password Strength Analyzer

- Developed a tool to evaluate password security using criteria like complexity, length, and resistance to attacks.
- Implemented algorithms to assess password entropy and provided real-time feedback and estimated attack time to users.
- Offered versatile functionality via CLI, GUI, and live web versions for broader accessibility.

EDUCATION

Ehackerify Training & Research Institute

2024 - 2025

Advanced Pentester (APT)

NAM College, Kallikkandy, Kannur University

2021 - 2024

Bachelor of Computer Science
